## **1 Introduction**

### **1.1 Identification**

This document contains a high level view of the System for Award Management (SAM) Data Dictionary and directs the reader to various other documents for a more detailed picture of the data elements found within SAM.

### **1.2 System Overview**

The System for Award Management (SAM) integrates the capabilities of eight federal procurement legacy systems and the Catalog of Federal Domestic Assistance into one new system. The overarching benefits of SAM, over its siloed legacy systems, include streamlined and integrated processes, elimination of data redundancies, and reduced costs while providing improved functionality. The following are the capabilities included:

- Manage entity data
- Manage certifications/representations
- Post solicitation and award data
- Maintain government-wide contract award data
- Manage government-wide subcontractor data
- Access wage determinations
- Manage/maintain past performance information
- Manage exclusion list
- Create/maintain assistance program catalog
- Provide security/access control
- Provide reporting/communications support
- Provide internal controls

IBM developed requirements for SAM and maintains it on behalf of the General Services Administration Integrated Acquisition Environment (GSA IAE). SAM is hosted by Qwest in Sterling, VA.

This data dictionary addresses the data elements associated with the Manage Entity Core Data, Assertions and Representations and Certifications, and the Manage Exclusion List capabilities. Data elements associated with other capabilities will be added as requirements are developed.

### **1.3 Document Organization**

This Data Dictionary provides overall listing and descriptions of all SAM data fields at a high level. Using this document allows you to view the characteristics of data elements and what each is used for. This document includes SAM field definitions and table definitions.
